

RADIAL DECKING

Construction: Moon Building Group

Radial Timber Decking can provide a stylish solution to any outdoor living area. Our durable hardwood species will help transform any entertaining area into a beautiful and functional space.

Available in our unique bevelled or square edged pencil round profiles in either dressed all round or sawn face we have a range of styles to suit all applications.

Radial Timber Decking is normally supplied in random lengths with the joints staggered. Some smaller set lengths may be available which will include a surcharge.

A clear oil coating can be applied to the decking to bring out the beautiful natural features or a stain instead could be used to colour match existing structures such as screening, cladding or flooring. Radial Timber can provide a range of pre-oiling services.

Radial Timber Decking can be used in Bushfire prone areas up to BAL 29 depending on the species.

We currently only supply sustainably sourced Regrowth Hardwoods or plantation grown timber. Our goal is to become fully self sufficient from our privately owned plantation resource once they mature and become available. Radial Timber has been privately planting plantations since 2004.

Radial Timber is committed to environmentally responsible timber production. Our timber is radially sawn locally using unique sawing methods which give us up to 40% more yield from younger, less desired saw logs than traditional sawing methods
