

RADIAL LINING

Photo: Tanglewood winery

Radial Timber Internal Hardwood lining boards are the perfect natural building product. This minimalistic profile can be used for both wall and ceiling applications to create an architecturally warm atmosphere.

A wide variety of appearances can be achieved. A clear coating will bring out those wonderful natural features or a stain can be used to colour match any interior.

The tongue and groove joining system which allows for a concealed fixing (70mm,90mm,130mm) in a regular pattern makes for easy installation.

Internal 13mm lining boards are supplied kiln dried and available in a variety of widths to suit each application.

Internal lining boards are used in various applications, to line ceilings, walls and eaves in: Houses, Apartments, Wineries, Restaurants, Hospitals and Schools. Studies have shown that we feel happier and healthier surrounded by timber.

We currently only supply sustainably sourced Regrowth Hardwoods or plantation grown timber. Our goal is to become fully self sufficient from our privately owned plantation resource once they mature and become available. Radial Timber has been privately planting plantations since 2004.

Radial Timber is committed to environmentally responsible timber production. Our timber is radially sawn locally using unique sawing methods which give us up to 40% more yield from younger, less desired saw logs than traditional sawing methods
