

RADIAL SCREEN BOARDS

Construction: CIGG

Radial Timber Screen Boards are a contemporary alternative to traditional cladding or fencing which compliments modern design in both residential and commercial applications.

Available in our unique bevelled and square edge profiles in either dressed all round or rough sawn we have a range of styles to suit all applications.

Radial Timber Screen Boards can be fixed in a vertical or horizontal application in random lengths or set lengths docked at standard sizes to suit your needs.

A clear oil coating can be applied to the screen boards to bring out the beautiful natural features or a stain could instead be used to colour match existing structures such as decks, cladding or flooring. Radial Timber can provide a range of pre-oiling services.

Radial Timber Screen Boards can be used in Bushfire prone areas up to BAL 29 depending on the species.

Port Phillip Landscaping

We currently only supply sustainably sourced Regrowth Hardwoods or plantation grown timber. Our goal is to become fully self sufficient from our privately owned plantation resource once they mature and become available. Radial Timber has been privately planting plantations since 2004.

Radial Timber is committed to environmentally responsible timber production. Our timber is radially sawn locally using unique sawing methods which give us up to 40% more yield from younger, less desired saw logs than traditional sawing methods
