

# RADIAL SHIPLAP

Builder: Plan to Build

Radial Timber Exterior Shiplap Cladding boards are a striking and modern way to finish off the exterior of commercial and domestic buildings.

The choice of two different profiles, Classic V-Joint (Face fixed) or our sleek tongue and groove Shiplap profile (concealed fixing) offers a wide variety of appearances through either its horizontal or vertical application.

Timber Exterior Cladding can be used in bushfire prone areas up to BAL29 depending on the species.

Our Exterior Cladding boards are supplied kiln dried and available in a variety of widths to suit each application. We also offer dressed or rough sawn versions to suit all designs.

Exterior Timber Cladding is a timeless finish with a range of options to suit every design. Whether its a clean modern look or a beautifully rustic and weathered finish, Radial Timber exterior cladding is a sustainable choice.

Rob Henery Architects

We currently only supply sustainably sourced Regrowth Hardwoods or plantation grown timber. Our goal is to become fully self sufficient from our privately owned plantation resource once they mature and become available. Radial Timber has been privately planting plantations since 2004.

Radial Timber is committed to environmentally responsible timber production. Our timber is radially sawn locally using unique sawing methods which give us up to 40% more yield from younger, less desired saw logs than traditional sawing methods
